

Introduction

around

CatBonk is a Community-run memecoin centered around a meme featuring felines wielding baseball bats and bonking other memecoins.

It knows what it is and it will never pretend to be something that it is not.

At the helm of parody and innovative financial technologies, CatBonk is perfectly positioned to build an unstoppable community and use its resources to do good in the world. CatBonk's fundamental goals are to bring joy and happiness to those who create and share memes related to its token, and more importantly, to push the boundaries of the traditional capabilities of memecoins in hopes to make a positive impact on the world at large.

Since we adore cats, we are committed to generating donations for charitable foundations that exist to preserve endangered wild cats, to renovating and building cat shelters in underserved areas that lack necessary resources to care for homeless cats, and to the improve awareness for endangered and homeless cats.

Community is the heart of this project. Without each other, there is no CatBonk. Through creativity, kindness, and altruism, we believe nothing can stop CatBonk from making the world a better place for cats, other animals, and for all of humanity.

Tokenomics

Why Binance Smart Chain (BSC)?

BSC is host to innumerable innovative projects and is a playground for countless talented developers. Given its fast and inexpensive transactions, it is a perfect place to build a token economy. We are grateful to have the opportunity to develop on such an active and user friendly blockchain network.

Contract Info

Address: 0xDFAABAa57dEc10c049335bdAA2e949B4Ce2eAD30

The CatBonk token (CABO) contract is a fork of the token SafeMoon. We believe this to be the best choice for a base token mechanism as it enables the community to bootstrap liquidity without having a significant amount of existing funds.

Steps Towards Decentralization & Tokenomics

- · Contract is a 1:1 fork of the SafeMoon token.
- · Contract Ownership is renounced.
- · 56.9% of Supply is burnt into PancakeSwap LP
- · 99.47% of the LP has been burned.
- · Fair launch with no presale.
- · Deflationary Tokenomics.
- · Automatic Yield generation (Passive Income) for CABO holders.
- · Transaction Tax: 10%.
 - · 5% distributed to CABO holders.
 - · 5% burned into Liquidity Pool.

Token Supply & Distribution

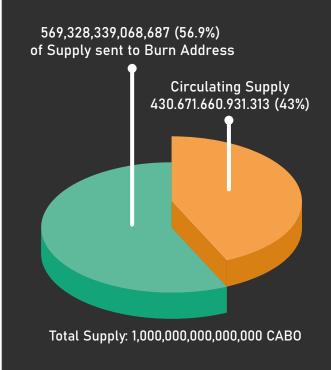

Token Supply and Distribution

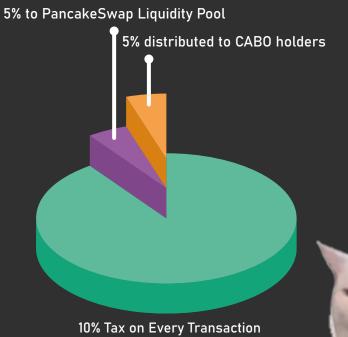

CABO had a fair community launch and there was no presale. At the time of writing this white paper, the token supply is as follows:

Total Supply: 1,000,000,000,000,000

Maximum Supply: 1,000,000,000,000,000 Circulating Supply: 430,671,660,931,313

Each CABO transaction (including buys, sells, and transfers) is subject to a 10% tax. Of this 10% tax, 5% is distributed to all token holders proportional to the amount of CABO they hold and the other 5% is delivered to a burned wallet that funds the liquidity pool on PancakeSwap.

Future Endeavors

Cat and Animal Foundation Donations

Whether it is a lion in the mountains or a house cat lounging on the couch, we love wild and domesticated cats. We are keenly aware of the dire situation that certain cat species face, which is why we are dedicated to raising funds through various methods in order to contribute to cat preservation in many ways including, but not limited to adopting a Clouded Leopard through the World Wildlife Fund (WWF), providing donations to Big Cat Rescue and other charitable organizations, and renovating and building cat shelters in countries where crucial resources are unavailable.

Further plans will be revealed in future versions of this Whitepaper.
